

Ref.No F8(10)/Doit&C/gen/2022-02855

Date:

Subject: Issuance of General Cyber Security Guidelines for End Users Operating on Official DOITC Internal Networks**Reference:** Multiple CERT-IN Guidelines

It has been observed through security monitoring and alerts generated by the Security Operations Center (SOC) that several end-user systems connected to SecLAN/RajSWAN/RajNET networks are vulnerable due to unsafe cyber practices and lack of adherence to basic cyber hygiene measures.

Instances of malware infections, phishing attempts, use of unauthorized software, weak password practices, and unsafe internet usage have been detected on multiple official systems. Such practices also pose significant risks to Government applications, network infrastructure, and sensitive data hosted at the State Data Centre and departmental servers.

In order to strengthen endpoint security and establish uniform cyber discipline across all departments and offices, the SOC at Department of Information Technology & Communication has prepared a document i.e. **“Cyber Security Best Practices for Official Computer Systems Operating on Internal (SecLAN/RajSWAN/RajNET) Networks.”**

The guidelines cover mandatory practices including:

- Installation and maintenance of Government-approved Antivirus/EDR
- Desktop hardening and system security measures
- Email and phishing awareness
- Secure internet and browser usage
- Strong password and access management practices
- Safe USB and data handling procedures
- Post-remediation monitoring and reporting mechanism

All concerned are hereby requested to circulate the enclosed guidelines among all officials and staff operating on official computer systems under their administrative control and ensure compliance.

All Department's may please ensure dissemination, awareness, and necessary monitoring at their respective offices/Cells. Any suspected cyber security incident must be immediately reported to SOC at the designated communication channels.

This shall be treated as priority and mandatory compliance in the interest of safeguarding State Government digital assets and critical infrastructure.
